Dedicated to my Dad Bryan Edward Finch who stood up to people and did the right thing , and lost his job as a skilled engineer and had to work in a chicken factory for the rest of his life for standing up to corruption . Thanks to my Mum for feeding , clothing and housing me .

Who Am I ?

My name is Gareth Edward Finch . My professional title is Professor Gareth Edward Finch . I have a long documented history to prove who I am in different forms of media .

I was born in Grantham Hospital and lived on Dale Road in Grantham , Lincolnshire UK since September 1981 until I went to university . I was featured in The Grantham Journal many times from age 11 onwards thanks to my participation in local sport and was featured on the back page of The Grantham Journal when I was 17 years old for being invited to Lords Cricket Ground to do a day's training session by the MCC . The Grantham Journal featured me on the back page in the sport's section after I took 5 wickets against the MCC whilst playing for my secondary school King's School Grantham in 1999 at cricket against the MCC . Thanks to Chris Duncan for believing in me and choosing me as first change bowler in that game even though I was in the year below at the time .

King's School Grantham

My school King's School Grantham is famous for two things . First it is famous for being the school of Isaac Newton the famous creator of the laws of gravity , and the apple falling on his head . Secondly , King's School Grantham is famous for being the only F R E E all boy's school in the UK which requires an entrance examination to get into the school . The sister school KGGS is also similarly famous for this reason , as being a single sex school which separates girls from

age 12 - 18 but requires an entrance examination to gain entry but is F R E E .

King's School Grantham was featured in mainstream press in the UK in the 2010s for having the highest number of geniuses of any school in the UK .

Key facts

King's School Grantham

F R E E school
Entrance exam required (The 11 Plus Exam)
Boys separated from girls
Only F R E E school in UK to separate boys from girls under the King's School name
Age 11 - 18
Grammar school endowed by Richard Foxe (making it free)
Former school of Isaac Newton
Featured in newspaper for having a high number of geniuses

The word F R E E is key to the vision I have for how to save the world .

Humans have always gathered around words which represent concepts . The word 'free' has a clear definitive meaning which has remained unchanged for centuries .

From when Richard Foxe endowed King's School Grantham in (1528) as a f r e e school , the definition of free has remained the same .

This is crucial to my vision of how to save the world . The revolution must be free .

What is my background and achievements ?

I created the first microblogging website and use of social media to connect school friends (from the year of 2000 King's School Grantham) in 2001 after taking magic mushrooms at university whilst in Wyndham Park , Grantham in the summer of 2001 . During that magic mushroom trip I had a life changing revelation about the nature of the world . I couldn't put my finger on it but I felt that there was something wrong with the world's media and specifically

newspapers , TV and radio at the time . The key takeaway was that those forms of media controlled every aspect of society , and it was embodied by a car turning left from Princess Drive onto Sandon Road and continuing down the road . I had a moment of revelation where during the magic mushroom trip I visualised the driver in the car and questioned why he was driving in that direction at that moment in time . And I concluded that it was because of the TV , radio and newspaper media which controlled 100% of his and everyone's physical actions at one point in time .

People's routines were in essence controlled by the information they saw on a daily basis and everything from jobs , to families , to activities was being controlled by the information they saw which was almost 100% controlled (in summer of 2001) by the information being shown on TV , in newspapers and on the radio .

It was a deeply unsettling feeling , because I could not be clear who controlled those three forms of media .

This magic mushroom trip acted as an inspiration for me to design the world's first microblogging website 'www.errgentlemen.co.uk' a few months later whilst back at university in Leeds before the second year aged 21 . I used Macromedia Dreamwaver to create a website www.errgentlemen.co.uk with the idea it could be a new form of media to counter that unsettling feeling from the magic mushroom trip revelation . It was also inspired by The King's School Grantham's (and KGGS's) use of the Jaspers Club Website (a local nightclub) message board which I had discovered whilst organising a party at Jaspers in 1999 / 2000 whilst still at the King's School Grantham .

4 years before Twitter , 5 years before Facebook

Jack Dorsey and Mark Zuckerberg have become famous as being the inventor's of the world's first microblogging website and world's first 'social media website for old school friends' but in fact they were second in both cases . King's School Grantham's free www.errgentlemen.co.uk was the first website dedicated to linking old school friends and featuring single line updates on errgentlemen.co.uk was the first microblogging website .

Jasper's message board has a claim to be the first place old school friends were linked , but in reality we were still at school at the time .

Friends Reunited has a claim to being the first social media site overall , having launched in 2000 but that was not for old school friends but was rather for connecting people in general .

Without the strong social bonds from the school King's Grantham and the female counterparts at KGGS I would never have been inspired to create the idea of errgentlemen.co.uk .

Life since then

My life since running errgentlemen.co.uk from 2001 - 2005 has been living abroad in Thailand where I became a University Professor at 29 years old .

In 2019 I made my second main contribution to the world's media . I wrote a proposal to change wrestling called ' The Proposal To Change Wrestling (2019) ' which argued professional wrestling should harness the power of influencer marketing and use Logan Paul as its main star to promote embedded products on their TV shows . Having taken my inspiration from the Macho Man / Slim Jim model of product marketing in the late 1980s , I created a visual academic paper and spent three years promoting it within the professional wrestling industry from 2019 to 2022 . I visualised wrestling returning to the mainstream with Logan Paul as its main star as long as products could be promoted on its show and through Logan Paul's influencer marketing networks .

Said differently , I am the author of the paper which led to Prime and Logan Paul in wrestling and $20bn being added to the wrestling industry in 3 years .

My third contribution to the media was working with Supergirl Jaroonsak to promote Muay Thai since 2021 which has led to Muay Thai trending higher in 2026 than it ever has before . Supergirl has toured USA three times , and female Muay Thai specifically has led to Muay Thai reaching the highest level of popularity it ever has in Thailand , USA and Worldwide since records began in 2005 .

My fourth contribution to the media is the most important perhaps . It is 'audiocampfires' . Audio Campfires (or audiocampfires or AudioCampfires) open source software . I spent five years working on it since 2021 and it finally launched the first version in April 2026 leading to 'opensource' trending to its highest point since records began in 2005 , and even higher than Bitcoin . 'Open

Source' means F R E E in technology .

Open Source / Free

Technology is governed by two types of software . One is private , paid for commercial software , such as Facebook and Twitter , or Amazon and Skype . Open Source means free , open and available to everyone with no restrictions possible . Bitcoin is the most famous open source software , with everything from the logo to the software being open and available to the public 24/7 365 days a year . The phrase open source means free and open source (free) software v paid for private software is the heart of the battle for the world today .

Depopulation v Open Source

When audiocampfires launched on April 30th 2026 , open source as a search time trended to the highest point since 2005 on Google Trends , formerly known as Zeitgeist, the world's first use of the phrase 'trending' .

My belief is that the people who control the media (TV , radio and newspapers , and later websites , and social media sites , Google , Amazon and almost all technology companies) are secretly being controlled by a group in an active depopulation agenda . Said differently , there is a secret elite trying to kill everyone in 2026 and unless they are stopped , they will achieve their goal by 2030 .

The key to stopping the secret elite is to create free open source software that takes the power away from the secret elite who have for the last 100 years secretly controlled people's physical actions through their monopoly on the world's media and technology .

F R E E T E C H N O L O G Y

F R E E E N E R G Y

The key to living in a world where everything is free , is free energy , which I believe has already been invented . But the key to getting free energy , is a free form of media that remains free for the rest of humanity .

The reason the word F R E E is so powerful is because it is a shared concept everyone can agree on and is easy for all to understand . If something is free today it will be free in 100 years and it will be free in 100,000 years . If it ever wasn't free , people would be able to see it . The moment something free suddenly started to cost $0.0000000001 would be clearly the moment it stopped being free . Free is a beautiful shared concept which since Richard Foxe made King's School Grantham free for local boys and surrounding areas , it has remained free for 500 years because free is a shared concept tied to a word that has never changed and would be very hard to change the meaning of . If King's School Grantham ever tried to charge $0.0000000001 to attend , people would all immediately know that the concept had changed and it was no longer free . Free is a beauitful word .

F R E E E N E R G Y

Free energy can lead to free food , free housing and free transporation forever . And once all those key elements of humanity are free , they will hard to change and stop being free because people's shared understanding of the word free is so strong .

Free energy can power free food production , and can power free building , and power people's homes for free , and nightlife , entertainment and travel , and every aspect of society can be driven by free energy .

So where does free energy come from ?

My belief is that free energy has already been invented by Nikola Tesla in 1901 . The reason it is not being used for free energy for the world today is that the knowledge of the free energy is being hidden by the media which is privately and secretly owned . Nikola Tesla invented the Wardenclyffe Tower which could suck energy out of the 'ether' and transmit it for long distances to almost anyone in America . I am not a scientist , and do not claim to understand it , but simply put Tesla found a way to take magnetic energy and natural energy and transmit it through power lines . The problem is that the secret elite got control of it and started to use it and charge people money for it to control them . The reason people do not know that it could be free , is because the world's media is

controlled by the secret elite (about 100 people) and they have used the media to keep it hidden that the energy in the world could be free .

Therefore , the key to creating free energy for everyone , is to create a free form of media which takes back power off the secret elite for the people (the 99%) and to let people have free energy in their homes .

Without a need to pay for energy , electricity , people's living costs could be reduced to close to $0 overnight .

Costly energy as a form of control

Electricity is currently being used by the secret elite as a weapon of financial control . Because they have tricked people to pay for free electricity , and they control the rates they charge , the secret elite is using expensive energy (which could be free) to attack people through financial instruments of power bills , which they keep putting up in price . It is a case of the frog being slowly boiled alive , and people's electricity bills being slowly raised to attack people in their homes in the forms of fake bills that are being used to drive people to financial ruin .

Other forms of free energy

I believe that lightning can also power free energy . Electricity sits in the ionosphere (the place in the sky above where clouds form) and with the HAARP technology (a microwave emitter) we can channel lighting to come down into the earth and power people's homes for free . The amount of electrical energy in the ionosphere is so high that it will never run out . Electrical energy comes back to the sky , through rainwater evaporating and taking negative ions with them , which puts the negative charge back into the sky . Lightning could be sucked out of the sky quite easily and be used to power people's homes for free .

HAARP as a weapon

Even though lightning could be used to power electricity alongside Nikola Tesla's Wardenclyffe Tower , I believe it is actually being used today to cause earthquakes . It seems the secret elite has taken the concept of sucking lighting out of the sky and used it with HAARP and instead of giving people free energy they are using it to fire energy underground at countries , otherwise known as earthquakes . I believe that earthquakes are caused by electricity from lightning being sucked out of the sky and being fired underground at places to cause politicians to go along with the elite's secret plans and to show extreme power .

The reason this is not talked about is because the world's media is secretly owned by a secret elite . Once again , the key to getting free energy from lightning to power people's homes for free (and free transportation and free food) is to take control of the media with a free form of media that brings this information to light .

F R E E F O O D

F R E E T E C H N O L O G Y

F R E E F O O D

Free food is easy to create with free energy . Animals are the best protein in the world , and protein is the healthiest food for humans . With free energy , animal rearing , and animal caring can be done freely . Animals like cows can be given long lives , and their meat harvested only when they die naturally , and because animals reproduce for F R E E there can be an abundance of free protein for everyone . Ironically most people who care for animals , or who claim vegan diets are the moral way to protect animals , are unaware that taking control of the media is the key to exposing the evils of factory farming . For it is the people who secretly control the media that also secretly control factory farming . The reason it is not known is because they secretly control the media . The key to liberating animals , and letting them live long loving lives , before dying in old age naturally , and being eaten by humans for free , is taking the media . With a free and fair media , the cruelty of factory farming and animal cruelty can be exposed , and free energy can be used to let animals live in the open in fields where they can live naturally and with the loving guidance of humans , also animals .

Regarding the space on the land . I believe the secret elite controls 99% of all the world's green land , and because they control the media secretly , they can hide this fact . By taking the media , all the 99% empty green land can be taken back off the elite , and let animals live there and reproduce and live long lives .

F R E E H O U S I N G
F R E E T E C H N O L O G Y

F R E E H O U S I N G

Free housing is trivially easy with free energy . With the means to power

machines that can build new houses , free housing estates can be created for homeless people and due to 99% of the world's land being owned by the secret elite , there is more than enough space to build houses for everyone .

Taking care of the homeless first

I believe that a society is only as good as how you treat the most unfortunate of society . Homeless people , alongside factory farmed animals , are the most unfortunate and poorly treated members of society today . To take care of homeless people immediately , I would take abandoned hotels and let homeless people have their own individual rooms , and also take 5* hotels off the elite , and let homeless people live there too . Luxury hotels , if powered by free energy , do not need to charge for rooms , and can provide free food for residents . Homeless people can be taken care of almost overnight by reposessing the luxury secretly owned elite hotels and simply letting homeless people stay there until their own homes are built , or perhaps forever .

F R E E T E C H N O L O G Y

F R E E T E C H N O L O G Y

Save the best to last . The most important bottleneck and the key to creating free energy , free food , free housing and free transporation , is to create a new form of free media that is powered by free technology . Technology is what is imprisoning us in 2026 and free technology can be the solution . Free technology must power a free 'open source' media and this is where my fourth project comes in . Audio Campfires can power a free media that mimics real life human face-to-face interraction .

I have been working on it since 2021 and the first version is now ready at audiocampfires.com . It being f r e e is crucial . If I ever sold it , or was tricked to part ways with it , as Wes Kussmaul tried but failed at , then the idea would no longer be free . I have fought long and hard (and almost ended up homeless for a period . . . I was one night away numerous times since 2025) to make sure audio campfires remained free and open source whilst I worked on it .

Audio Campfires

Audio Campfires is a digital concept of a person-to-person (peer to peer , or P2P) audio campfire that can allow people to talk live from headset to headset ,

mobile phone to computer , or desktop browser to laptop , 24 hours a day , for free (as long as they have a valid internet connection) .

When I first started thinking of the world's problems in 2018 , and more so after the covid lockdowns in 2021 , I came to the conclusion that whatever form of communication was need it had to satisfy a few key criteria :

-it had to be a natural way humans communicate as if in person face to face
-it had to be free
-it had to be available to everyone in the world
-it had to be easy

After years of long walks , smoking marijuana , and doing designs , the conclusion I came to was that 'campfires' or mathematically fair circles , should be used . I am not saying this is the only solution , or even the best , I am saying this is my idea that I believe can save humanity .

Humans sat around campfires for hundreds , or thousands of years at the end of long days hunting , or travelling around , or in local communities . Without electricity in the past , heat from campfires was used to create warmth at night for humans to sleep or to scare animals away whilst people slept . By having a centre point for people to gather , humans talked around the campfire , a circle by design . A node of warmth , safety and conversation .

Digital campfires , or audio campfires , were the most natural fit for the modern day human to talk through computers without having to travel to nature . A major benefit of the audio campfire is that it enables anyone to talk to anyone anywhere in the world without having to travel .

Lets look at advantages and disadvantages of physical v digital audio campfires :

Physical campfires	Digital audio campfires
Fair seating positions	Fair seating positions
Emit heat	Emit no heat
Cosy	Could be cosy , but may not be cosy
Ward off predators	Not needed to ward off predators
Humans meet physically	Humans do not meet physically
Must travel	No travel needed
Can talk live	Can talk live
Talk to people there	Talk to anyone in the world
Require wood / flame	Require internet connection / phone / computer
Are free	Are free with internet connection
Can let 10-20 talk live	Can let 10-20 talk live but many possible
Require meeting people	Do not require meeting people
Can hold hands	Can not hold hands
Can cook food	Can not cook food

I hope you can see there are some similar strengths and diverse differences between real physical fire based campfires where people talk in person , versus digital 'mimic' campfires that allow live audio conversation through technology but with no travel needed .

In terms of scalability , digital campfires win hands down , and in terms of human experience physical campfires win hands down .

But the goal here is to create a new form of media that can rival and take power away from the secret elite and therefore using computers and phones as the medium to do it is essential .

Audio Campfires technology

I worked backwards from the ideal goal of what I thought was needed to create a media revolution and the following design (as of November 14th 2026 as I type it) is where it is currently at .

Audio Campfires is very lightweight . It is currently 58kb (index.html) and 19kb server (server.js) to power the whole thing . That means audiocampfires is currently 2 files and the total size is about 78kb .

Technology comparisons

I searched an AI for what 78kb is in technology terms and it said the following :

--> "78 KB (kilobytes) is a tiny amount of data—roughly equivalent to a single short article, a heavily compressed thumbnail image, or a very lightweight script."

78kb is 78000 bytes

1 byte is the minimal (I think) size of information in technology . 1 byte is what 1 letter would be . AI said :

--> "1 byte is enough space to store a single text character ."

78kb is therefore enough space to store 78000 letters .

78kb is the equivalent of 487 SMS text messages .
78kb is the equivalent of one Microsoft Word File of 10 to 15 pages long .
78kb is the equivalent of one small thumbnail image .
78kb is the equivalent of 5 seconds of an MP3 .
78kb is the equivalent of 5% of a 1.44MB floppy disk .

Said differently , 78kb , is very small .

Audio Campfires entire size , including the webpage application and the server that powers it , is only 78kb today as of today November 14th 2026 .

I do not expect it to get much bigger . It may grow slightly , or perhaps may get smaller , but this simple 78kb file should be enough to power a revolution .

The beauty of size

Sometimes bigger is better , and sometimes smaller is better . In the case of audio campfires , smaller is better .

Advantages of audio campfires being very small

78kb Audio Campfires can be saved by anyone on pen drives , PCs , or sent by email . It is so small it can be attached to other applications and used inside other applications . Audio Campfires could be like a holster that attaches to other technology to form effortless communication networks . Audio Campfires can have multiple servers meaning that it is hard to take down .

Lets compare it to other software :

v Skype 1.0 (2004) 10MB was 128 times larger than 78kb AudioCampfires . Therefore Audio Campfires is 99.2% smaller than Skype V1.0 10MB .

v Skype 8.0 (2018) 227MB was 2900 times larger than 78kb AudioCampfires Therefore Audio Campfires is 99.97% smaller than Skype V8.0 227MB .

v WhatsApp (2026) iPhone 411MB is 5272 times larger than 78kb AudioCampfires .
Therefore Audio Campfires is 99.98% smaller than WhatsApp iPhone 411Mb .

v Microsoft Word (2026) Desktop 4000MB is 51280 times larger than 78kb AudioCampfires .
Therefore Audio Campfires is 99.99% smaller than Microsoft Word Desktop 4000MB .

The comparison to Microsoft Word is an important one because Microsoft Word is a communication device just like Audio Campfires but in a far inferior typed written version , based on text , rather than live speaking . If you compare natural human communication , of conversation and body language , it is far closer to the spoken form of audio campfires than the more abstract written medium of text on a computer screen of Microsoft Word . Also , Microsoft Word is private paid for software v the far more superior open source f r e e software that can be used for anything forever as audio campfires is .

Main avantages of audiocampfires v Most other software

Audio Campfires	Most other software
Free	Paid , or has costs
Tiny	Big size
Open code	Hidden code
Anyone can use	Only to paid users , can be banned
Anyone can modify	Not able to modify
Open source	Private code
Owned by everyone	Owned by secret owners
Public software	Private software

How does audio campfires work ?

The server.js is put on a VPS (VPS = Virtual Private Server) .
A VPS is a computer online that powers it .

Users go to the index.html and it will open a 'Click to Join' button which will send people to the campfire . Once there , they can turn on or off their microphone and other users at the campfire will hear what they say and vice-versa . Other members of the campfire will be live , and can talk to other users for free . A listening mode enables people to listen for free without having to join the conversation . It's possible to turn the live listening mode off so it becomes like a private campfires but the listening mode is active by default so it doubles up as a world radio .
