THE SOLUTION

2026

Professor Gareth Edward Finch

November 7th 2026

The solution to the world's problems in 2026 , as of November 7th 2026 , is a media revolution driven by peer-to-peer (person to person) decentralised F R E E technologies that ultimately leads to taking the BBC .

The root of the problem

The root of the problem in 2026 is a secret elite that secretly controls the media and by doing so has been able to slowly try to bring in a new world order takeover attempt with the intended goal of finishing it by 2030 .

New World Order Takeover attempt

The New World Order takeover attempt is an attempt by the secret elite to kill 80% of the world's population by 2030 and in doing so bring in a totalitarian police state that will make the rest of the world their slaves using advanced technology , digital tagging , and advanced weapons like laser drones and 5G microwave weapons .

How it could look

How could they takeover the media secretly ?

To control the media , they only needed to take control of these bottlenecks :

-Control newsreaders on BBC , CNN and FOX News (about 10 - 20 people ?)

-Control newspaper editors of major newspaper (about 20 - 30 people ?)

-Control radio DJs on mainstream radio shows (about 15 - 30 people ?)

-Control the public faces of technology , websites and social media (about 5 - 20 people ?)

That means , to control the narrative of what 7 billion people see and think requires only about 100 people under total control of the secret elite .

Politicians can be controlled through what the media says about them , and if you put your own politicians into place , the politicians don't even need to be controlled because they are part of the elite at the start .

The internet is from CERN (logo is 666)

The internet was sold to the public as an open source of information . At first it was slow and hard to use , but as it has grown , it has become more and more centralised and more and more censored . The internet was officially created at CERN - whose logo is 666 - by Tim Berners-Lee . The internet can be turned off as of 2026 with the Google 'blacklist' switch which gives Google the power to turn off the entire internet with the simple flip of a switch . This was tested in 2009 when the entire internet went down for 55 minutes . In the opinion of the author , it was a test , to test turning off the internet . Said differently , the internet is a primitive form of technology that was designed and promoted as open and free through the media but in reality is a crucial centre of control of the secret elite .

The BBC Live 24 hour news stream

If there was one centre that would define a revolution , it would be the BBC Live 24 Hour News Stream . If ever a revolution took tcontrol of the BBC Live Camera ,all other dominoes , from centralised internet , to newspaper editors , to which foods are the healthiest to whether gangster rap is real or fake , all will fall quickly .

Why is the BBC News Stream so important ?

It goes to every hotel room in the world (well , not every , but a significant amount of hotel rooms) . The BBC is also seen as being formal and partial so most people will only believe in a revolution if it is shown on the BBC .

Fox and CNN would not be able to ignore the BBC if it was taken over by a revolution . Taking the BBC News Network would be one domino to rule them all .

The solution 1 - Take the BBC LIVE NEWS CAMERA off The Secret Elite

Even if the BBC is taken , there still needs to be a new form of technology (at least 1 , and preferably more) that allows anyone to communicate with other people anywhere in the world with no restriction in real time .

The current technology choices , from the internet , to WhatsApp to Facebook to Twitter , to email , to telephones , to Signal , all rely on services that can be turned off . Not only that , they are governed by companies that profit from them , or can restrict your use at any point .

If you use WhatsApp your mobile phone number can be taken away .

Signal can have your messages read and accounts can be deleted .

Mobile phones can break , or numbers restricted .

The internet can be turned off with Google's blacklist button .

Twitter can delete your account .

Email can delete your emails or block important messages or close the service .

The ideal choice

The ideal choice for human communication is something that mimics real life human communication but in a way that anyone can use and does not require a centralised service , or any account that can be deleted .

The solution I have created is called 'audiocampfires' . Humans have for centuries gathered around campfires to discuss things as a group or tell stories sitting around circular centres of warmth that create equal egalitarian speaking positions .

Audio Campfires

Audio Campfires is a free person-to-person software that was invented in 2026 and has been designed over the last 5 years since 2021 . It allows up to 10 people at once to talk in groups of up to 10 people from anywhere in the world . Because it is free (called 'open-source' in technology) anyone can use it , or use the code and implement it elsewhere . It being free is crucial . The idea is that people should be able to talk quickly and easily , whether they are in Papua New Guinea , or sitting in an editor's studio in London about to go on the BBC News Channel live .

Audio Campfires are:

- **+free**
- **+open source (as the inventor I am donating it and saying they must always be free)**
- **+require NO USERNAMES**
- **+require NO PASSWORDS**

Audio Campfires are easy to use and people can click to join a human conversation in seconds anywhere in the world .

The time it takes to link someone from a rainforest in Papua New Guinea to a news editor sitting in a BBC Studio in London is about 3 seconds .

--> About 3 seconds .

This example presumes an active internet connection , or having access to a computer or mobile phone . Audio Campfires require electricity and some form and a form of internet connection . All forms of technology require the same , whether it is Signal , phone calls , or email , so there is nothing unique there.

Solution 2 - A free person-to-person audio protocol requiring no usernames and passwords that can work through a computer or mobile phone .

If audiocampfires is working , the next question is 'where to meet' . The whole world can not talk in one 10 person campfire , and practically speaking , 7 billion people can not wait for their turn to talk either .

The answer is 'internet hall' . The internet hall is an abstraction that uses WORDS and NUMBERS to create a near infinite number of rooms that allows anyone to talk at any letter or number combination which all lead into separate halls based on the words.

Internet Hall

Internet Hall uses audiocampfires to create a scalable , large , near infinite place that can power a revolution .

The halls (or rooms) in Internet Hall will all operate 24 hours a day and will allow people to talk live around a variety of subjects that will largely be decided by the name of the room .

The number of rooms is limited by the numbers and letters of the English alphabet and number system .

Here are the choices of letters and numbers :

- 1-1
- 2-2
- 3-3
- 4-4
- 5-5
- 6-6
- 7-7
- 8-8
- 9-9
- 10-A
- 11-B
- 12-C
- 13-D
- 14-E
- 15-F
- 16-G
- 17-H

18-I	27-R
19-J	28-S
20-K	29-T
21-L	30-U
22-M	31-V
23-N	32-W
24-O	33-X
25-P	34-Y
26-Q	35-Z

All words in the English language can be created with these letters , and all numbers can be used to create a finite (but almost infinite) number of combinations of Internet Halls that people can choose to visit .

That gives us :

103,331,479,663,861,449,296,666,513,375,232,000,000,000

possible Internet Hall rooms .

Thought it is technically not infinite , it is close enough to infinity for our needs to overthrow the secret elite and create a place for everyone to talk .

The beauty of internet hall is that numbers come first ('1' is likely to be the most popular place and '2' the second) . Also keywords can be separated with numbers , so if 'history' is full with 10 people talking at once , someone could join 'history1' or 'history2' or '1history' or '5history' or 'history5' and so on . The numbers can be powerful differentiators between keyword rooms and creates a natural filtering system that humans can understand .

Words , and English words inparticular are used here as an 'entry system' into a shared reality we can all agree on , and because it is person-to person (10 people to 10 people) there is a shared set of rules that people can understand . The human brain can easily understand a limit of 10 people per hall .

Time limits

One decision that could change how internet hall works is if there is a time limit in each hall . As it currently stands , I believe that 1 hour should be the limit for each speaker . The reason is to stop one person potentially monopolising a key position , perhaps a nefarious speaker who is clever at talking , and it would also make it harder for BOTS (computer programmes) to take over positions . Each time you want to join a room , you are going to have to click a button or type a word to join the room . 1 hour seems like a fair limit , and it could also be 4 hours , or 10 hours , but for the sake of simplicity I believe that 1 hour should be the standard limit in each hall . The server and rules of internet hall can remove speakers automatically after 1 hour without much effort , and if people are enjoying the conversation they could simply rejoin immediately if there is space . This idea of a time limit is to prevent people monopolising key terms like '1' or '2' or 'bitcoin' and 'history'.

Solution 3 - Internet Hall . A word/number based entry point system into a near infinite number of word based spoken conversations .

Homelessness is a problem that needs a solution

More and more people are becoming homeless as the secret elite tries to use financial tools to break people financially . A solution is to take control of hotels in the world and give homeless people free rooms . If there is a secret elite running the world (and there is) then they almost certainly own most of the hotels . In this example I am not thinking of a local bed and breakfast , but rather large chain hotels like Hilton and corporate hotels . If the owners of hotels are found to be members of the secret elite , take their hotels , which by definition are buildings with empty rooms , and give the rooms to homeless people . The quality of a society is decided by how you treat the poorest people of the society , and what better way than giving free rooms in the best hotels to the poorest people .

> **Solution 4 - Give free rooms to homeless people in 5 Star hotels .**

By fixing homelessness as soon as possible , you can focus on the next task of fixing food and nutrition for everyone .

Free food should be a goal of humanity . There is more than enough land in the world to create more than enough food for everyone . No-one should go without food , especially homeless people , or the poor . Again , the quality of a society can be decided by how it treats the poorest people , and if people have no food , that is a sign something is going wrong . Free food can be created with land taken off the secret elite . Cows and animals reproduce for free , and have sex for free , so free food can be created by giving animals fair and long lives . There should be no lack of nutrition for anyone in a fair and open society with free food .

> **Solution 5 - Give free food to everyone and re-posses the land that the secret elite owns . It is estimated 95% of the world's land is owned by the secret elite . Take it off them and use it to create free food for everyone , starting with the homeless and the poor .**

Free drinking water is a must too . I am not sure how , but there must be free water possibilities , such as filter systems that creates free water from rain , or public water fountains linked to spring water . I will not spend too long

on this , because it should be fairly easy to implement compared to other solutions .

Solution 6 - Create free water systems for everyone (and make sure the water is clean) .

Perhaps the most important solution apart from taking the media , is to create free energy . Free energy can power free food production and free water creation and free transporation / housing .

What is interesting about this is that free energy devices appear to have already been invented ! Nicola Tesla has allegedly created free energy systems that can take magnetic energy or energy from the 'ether' and can be turned into electricity for free . The problem as of November 7th 2026 is that these free energy systems have been monopolised and stolen by the elite over the last 100 years and allegedly it was Donald Trump's relative who stole the patents off Tesla after he died . If the secret elite is overthrown by creating a new media system (whether powered by audiocampfires or otherwise) then the free energy systems that the elite has stolen can be given back to the public and the public can have free energy ... forever .

Free energy brings...

Free food

Free drinks

Free housing

Free travel

Free almost everything

With no need to pay for energy , almost everything can be free .

Solution 7 - Take the free energy technology back off the elite and use it for humanity .

Once free energy is implemented for humans , animals can benefit from free energy , and animals can be given a better way of life including the ending of factory farming . Cows can be given free lives in fields , reproduce for

free , and live long lives before their meat is used to feed the homeless after dying .

Solution 8 - End factory farming and give animals a nice long life .

Once housing , food , water , humans and animals are taken care of , the aims can turn towards transportation . Being able to travel the world , free , and safely , is an achievable goal with free energy systems and comfort and safety can be a prime consideration . The shape of the earth is important here , because if it is round / spherical then boats and planes may be the best way to travel internationally , but if it is flat (as some say) then underground trains become a real possibility . Travelling from Tokyo to LA to Bangkok in the same day becomes a real possibility with a high speed , free magnetic underground train network . Trains that go under the sea are possible if the world is flat , and the train lines might already be built if rumours of the elite's creations are true .

Solution 9 - Create free international travel , preferably by underground train network . If the elite have already built the train lines underground , repurpose them for free international travel for all people 24 hours a day . If the underground train networks are not currently built , set about building them and aim to finish linking the main cities within 50 years (could be 10 years , or could be 100 years) . Use magnetic technology to create fast travel that is comfortable and fun , and most importantly safe . Free energy means travel should be free .

Who is Professor Gareth Edward Finch?

Professor Gareth Edward Finch is the author of The Proposal to Change Wrestling (2019), a paper that set out a strategy for adapting professional wrestling to a changing media landscape through influencer marketing, social-media storytelling, technology and creator-led brand partnerships. The proposal identified Logan Paul as a potential crossover figure and argued that the reach of online creators could connect wrestling with new audiences.

The proposal's strategy led into the creator-led transformation of wrestling: Logan Paul's emergence as a WWE performer, the rise of PRIME?co-founded by Logan Paul and KSI?and PRIME's major partnership with WWE. Together, these developments brought influencer reach, social-media audiences and product branding directly into wrestling's commercial model. PRIME became WWE's official hydration partner in 2024, with its branding placed at the centre of the ring mat.

Using figures presented by Logan Paul on his own show, Professor Gareth Edward Finch calculates that the combined Logan Paul and PRIME effect added as much as $20 billion in value to wrestling's wider commercial ecosystem. The figure is presented as a calculation based on those show figures.

LOGAN PAUL

PRIME HYDRATION
